

StripeFlow Payments & Treasury REST API Reference (v2.4)

Enterprise Merchant Gateway Specification - Revision 2026.10

Base URL: <https://api.stripeflow.dev>

Authentication: Send Authorization: Bearer <token> on all requests.

All requests and responses use JSON (application/json) over TLS 1.3.

List Customer Profiles

GET /v1/customers

Returns a paginated list of merchant customer profiles.

- email (query, string, optional): Filter customers by exact email address
- limit (query, integer, optional): Max records to return (1-100)

Retrieve Customer Profile

GET /v1/customers/{customer_id}

Fetches billing metadata and default payment method for a single customer.

- customer_id (path, string, required): Unique customer identifier (cus_...)

Payment Charges & Capture Operations (Page 2)

List Payment Charges

GET /v1/charges

Lists settled and pending payment charges across the merchant account.

- customer_id (query, string, optional): Filter charges by customer ID
- status (query, string, optional): Filter by status (succeeded, pending, failed)

Retrieve Payment Charge

GET /v1/charges/{charge_id}

Retrieves full settlement details and receipt URL for a specific charge.

- charge_id (path, string, required): Unique payment charge identifier (ch_...)

Create Payment Charge

POST /v1/charges

Authorizes and captures a new payment charge against a customer profile.

- customer_id (body, string, required): Customer identifier to bill
- amount_cents (body, integer, required): Charge amount in minor currency units
- currency (body, string, required): Three-letter ISO-4217 currency code (USD, EUR)
- description (body, string, optional): Statement descriptor shown on receipt

Refunds & Account Lifecycle Operations (Page 3)

Issue Charge Refund

POST /v1/charges/{charge_id}/refunds

Creates a full or partial refund against a previously captured payment charge.

- charge_id (path, string, required): Target payment charge identifier to refund
- reason (body, string, required): Refund reason (duplicate, fraudulent, requested_by_customer)

Delete Customer Profile

DELETE /v1/customers/{customer_id}

Permanently deletes a customer profile and detaches stored payment methods.

- customer_id (path, string, required): Unique customer identifier to delete
